Asphalt Thickness Mapping – Burnaby, BC

A local roadway authority was worried about the state of asphalt coverage over a stretch of road. Unsure of the extent of repair required, GeoScan was hired to map the asphalt thickness.

The survey revealed the extent of the asphalt thickness and highlighted the areas which actually needed repairing therefore saving time and money resurfacing unnecessary portions of the road.

GPR Data Showing Asphalt Thickness

GeoScan utilizes the latest GPR equipment which can operate at highway speed and requires no traffic control.

We can cover several hundreds of km per day. This provides high efficiency service and makes large projects more affordable.
