Utility Clearance for Boreholes: Port Mellon, Sunshine Coast, BC.

A brownfield site and current logging port on the Sunshine Coast required the drilling of numerous borehole test wells to be drilled for a stage 2 environmental assessment.

A complete utility locate of the area was completed to insure nothing was hit during the drilling process. Being private land there was little to no records of underground utilities. Both electromagnetic locating and ground penetrating radar were used to find the existing utilities in the area.

Although a relatively open site its land use had changed a number of times over the years and the utility locate revealed both the suspected and some unknown utilities in the area.
